

SPAM

IT ACCOUNTS FOR OVER 90% OF EMAILS.
IT WASTES YOUR TIME AND MONEY.
IT MUTATES EVERY SECOND.
EVERY MINUTE. EVERY DAY.

YET MOST ANTI SPAM SOLUTIONS WON'T
GIVE YOU THE PROTECTION YOU NEED.

'In a busy small business like ours, wasting time with things like unwanted email really hurts. NSFS has solved that issue for us beautifully. Plus their customer service is excellent.'

Cate Rayson (My Architect, Sydney)

You may already have anti spam software installed in your mail server, or expensive hardware that installs updates daily. Nowadays, this software and hardware works on 'signature', which requires updating continually.

Initially it filters spam with up to 50–80% accuracy, but as time goes by, its performance will degrade exponentially as spam mutates every minute.

WHAT IS NODENS SPAM FILTERING SYSTEM (NSFS)?

NSFS is a dynamic, ever-evolving system that captures 99% of all spam without affecting the flow of legitimate email.

How does it work?

This 5-stage spam filtering system begins with standard methods where the email is checked against third party black listing lists, viruses, phishes etc. From there, we apply our own proprietary methods based on a complex algorithm that ensures it keeps up with the constant, minute-by-minute evolution of spam and keeps your computers protected.

What happens next?

All released emails are 'fingerprinted' so that they are 'remembered' by the system, ensuring a smoother email flow on the next communiqué. NSFS 'learns' quickly and any delayed emails blocked during the initial phase of the service are soon released automatically. Clean, filtered emails are then diverted back to the client's existing email server.

How accurate is it?

Very very accurate. Take a look at the statistics on our website home page at <http://www.antispam.com.sg/> showing the number of known spam mail that has passed through our system against the total of spam. The numbers speak for themselves.

'Not a single unwanted mail came into my mailbox when the NSFS was implemented into our system. It really saves us a lot of time and effort to delete them.'

Kenneth Tan (C P World, Singapore)

NSFS ASSISTS THE FOLLOWING BUSINESSES

Our clients range across a broad range of industry sectors such as consulates and embassies, law firms, finance, design houses, manufacturing, shipping and food & beverage. They include:

BIC Melbourne
